

Overall View – 6" O.D. Core x 58-1/2" Long part

Left Hand Side

Right Hand Side

Left Hand View Close-up

See photo above and below. Note the gap between the steel journal and the aluminum arbor. There are two cap screws missing (of the pattern of (6)). Someone has taken this

apart and not reassembled it properly.

# GOLDENROD CARBON PULTRUSION SHAFTS — THE DIFFERENCE IS IN THE DETAILS!

Goldenrod manufactures the industry's only carbon fiber multiple bladder shaft — the lightest weight, yet most rigid winding shaft on the market. Our patented carbon fiber pultrusion design means all fibers are oriented in the same direction, not wound like competitor's models. This allows for superior stiffness and winding speeds.

## BENEFITS OF GOLDENROD CARBON PULTRUSION SHAFTS

Lowest Deflections. Low Inertia. Highest Critical Speeds. Lightweight and strong multiple bladder or steel-sleeved composite lug designs. It all adds up to the best performing, lightest weight shafts available today.

- Lightest composite shafts on the market
- Patented multiple bladder pultrusion design in high and super-high modulus carbon fiber
- Composite material completely surrounded and protected by metal
- Journals seat into metal for strong connection
- Extremely low inertia for the highest rotational speeds
- Best stiffness due to patented pultrusion carbon-fiber construction

Patented Pultrusion carbon fiber construction provides
